Bài tập 2

```
public class Bank {
    public float getRateOfInterest () {
        return 0;
    }
}

class SBI extends Bank {
    @Override
    public float getRateOfInterest
        return 8.0f;
    }
}

class ICICI extends Bank {
    @Override
    public float getRateOfInterest () {
        return 7.0f;
    }
}

class AXIS extend Bank
    @Override
    public float getRateOfInterest () {
```

```
        return 9.0f
    }
}

Main
public class testBanh {
    public static void main (String [] args ){
        Bank b;
        b = new SBI();
        System.out.println ("Lai Suat SBI: " + b.getRateOfInterest() +
          "%");

        b = new ICICI();
        System.out.println ("Lai Suat ICICI " + b.getRateOfInterest()
    + "%");

        b= new AXIS()
        System.out.println ("Lai Suat AXIS:" + b.getRateOfInterest()
    + "%"
```
